REPORT

Website Screenshots, Features and Sample Code

Introduction

This report consolidates the ten supplied website screenshots into one document. The first six screenshots show **Healthy Bites**, a healthy-food information website with food categories, recipe cards, a sample daily meal plan, healthy-eating tips and a contact form. The remaining screenshots show a **hotel reservation website** featuring a booking banner, room options, facilities and a reservation request form. The screenshots are included as visual evidence, followed by a short sample HTML/CSS implementation to illustrate the structure and styling of a website like the one shown.

Objectives

• Combine the provided screenshots into a single, organized PDF report.

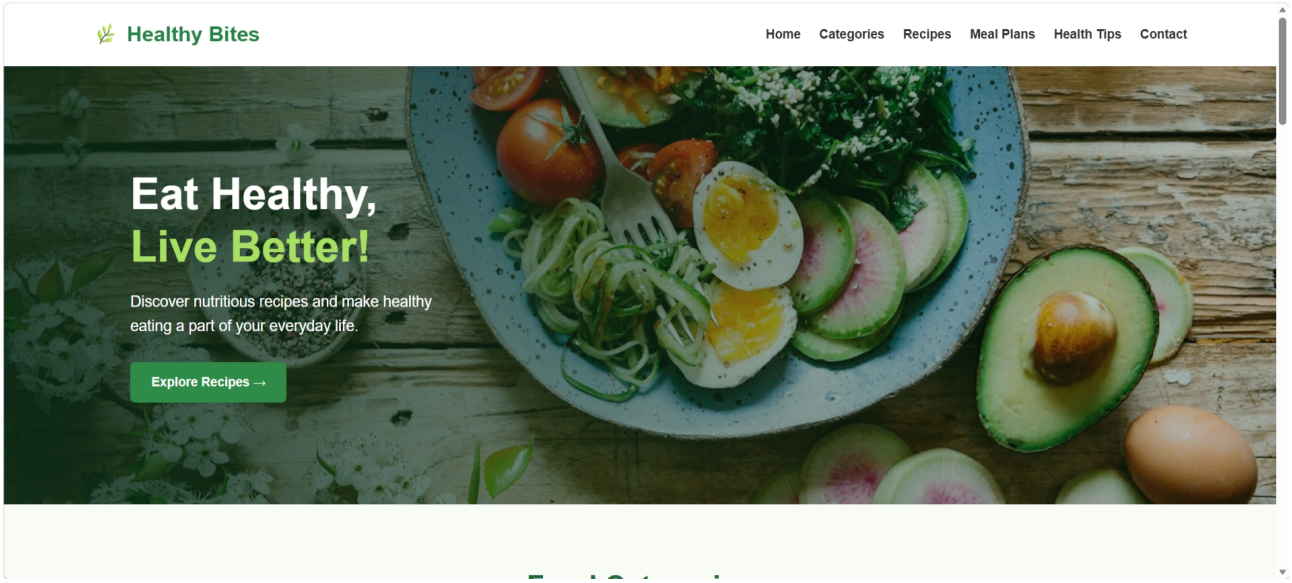

• Summarize the main sections and visible features of both website designs.

• Provide a concise example of HTML and CSS that can be adapted for a website project.

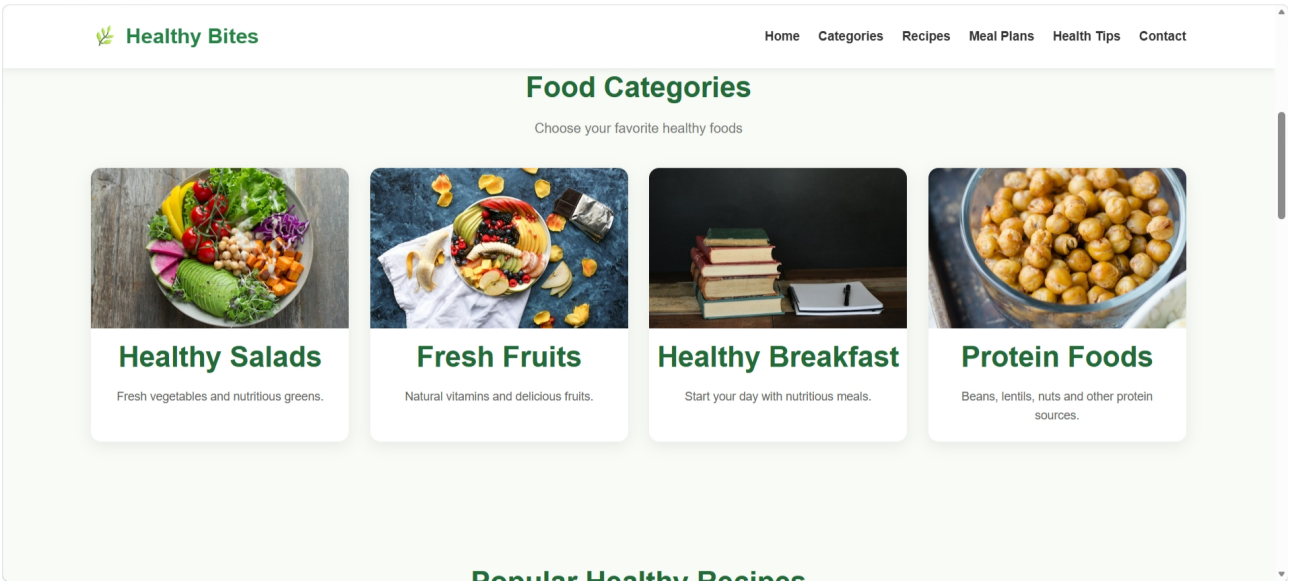

1. Healthy Bites Website

Healthy Bites uses a green-and-white visual theme, a navigation bar and a food-focused hero image. Its visible sections include food categories, popular recipes with ingredients and preparation times, a daily meal plan, healthy-eating tips and a contact form.

Screenshot 4 — Daily healthy meal plan

Screenshot 5 — Healthy-eating tips and contact area

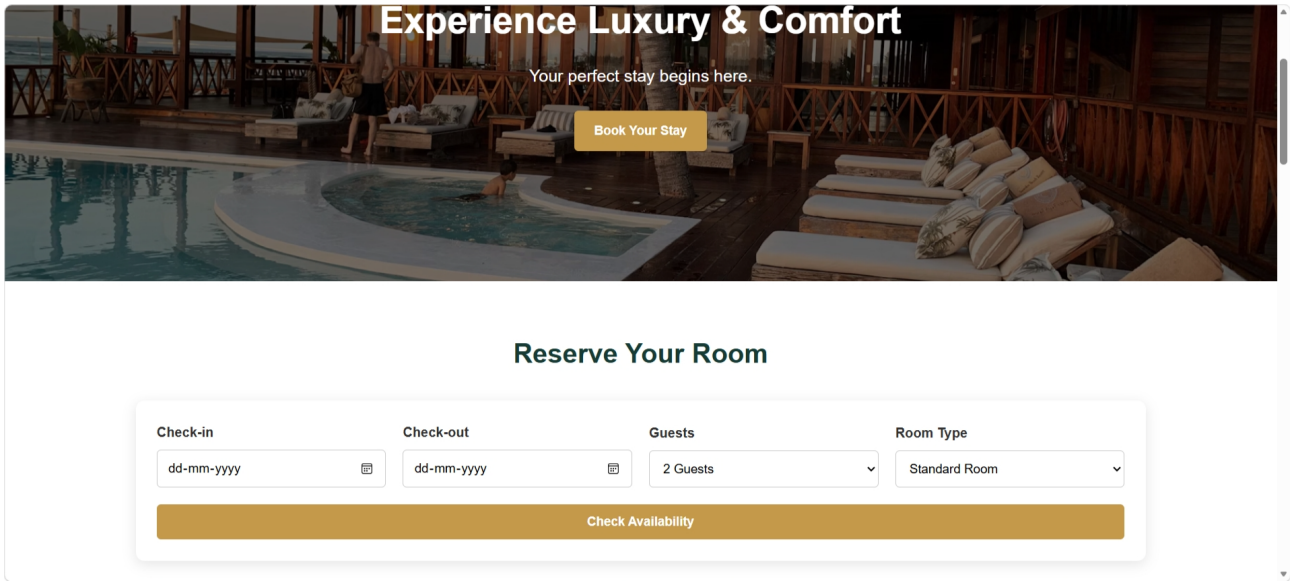

Screenshot 6 — Contact form and footer

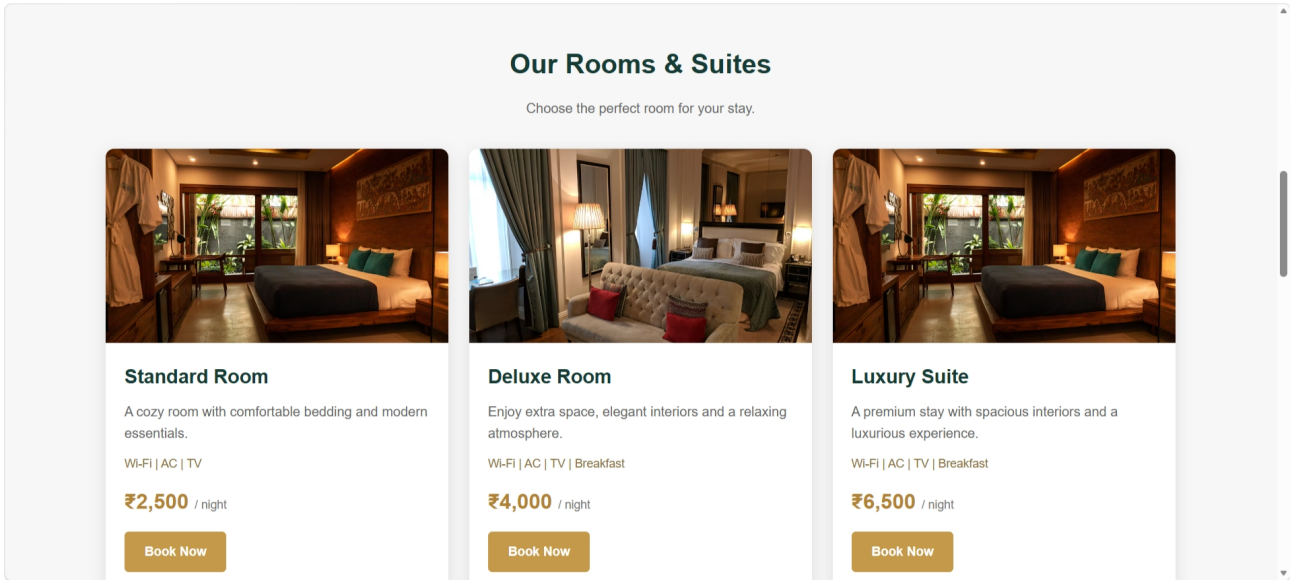

2. Hotel Reservation Website

The hotel website uses a luxury-style banner and gold accent buttons. The screenshots show a room-availability form, room and suite cards with nightly prices, facility cards, and a detailed reservation form for guest information, room category, dates and special requests.

3. Sample Website Code

The following is a short starter example based on the Healthy Bites layout. Save the HTML as **index.html** and the CSS as **style.css** in the same folder. It demonstrates the navigation, hero area, content cards and responsive styling; it is not a complete reproduction of every section shown in the screenshots.

Conclusion

The screenshots illustrate two different website concepts: a healthy-food information site and a hotel booking interface. Both use clear section headings, card-based content and forms to help visitors find information or submit details. The included code is a starter template for the Healthy Bites design; interactive booking, contact delivery and data storage would require additional JavaScript and/or a backend.
